

TODAY'S THEME · GROUND CONTROL

Hit the same spot every time.

The big idea: Consistent contact isn't about swinging harder or being perfect — it's about controlling **where the bottom of your swing happens**. Brush the ground in the same place every time, and the ball simply gets in the way of a good strike.

THE 5 BASICS FOR CLEAN CONTACT

- 01 Set up the same way**
Athletic posture, stance about shoulder-width, ball just ahead of center. **"Same setup, same strike."**
- 02 Weight forward — keep it there**
Weight hanging back is the #1 cause of fat & topped shots. Finish with the belt buckle at the target. **"Finish on your front foot."**
- 03 Ball first, then ground**
Club hits the ball *then* brushes the grass in front — no scooping. The loft lifts it for you. **"Hit down to send it up."**
- 04 Steady center**
Swaying and bobbing move the low point around. Keep head and chest quiet while the body turns. **"Turn around your buttons."**
- 05 Balanced, smooth tempo**
Trying to kill the ball wrecks contact. A smooth swing you can repeat beats a hard one you can't — if you can hold a balanced finish, the strike was probably good. **"Smooth and balanced beats fast and off-balance."**

THREE SIMPLE DRILLS

Tee-Gate Brush

Set a tee or line just in front of the ball. Brush the grass (or clip the tee) *after* the ball. Teaches ball-first contact instantly.

Feet Together

Hit little shots with feet almost touching. Forces balance and a steady center — contact gets crisp fast.

Finish & Hold

Swing and freeze the finish on your lead foot for 3 seconds. Trains weight forward and balance in one move.

TAKE THIS HOME

"Consistent contact comes from a repeatable setup and controlling the bottom of your swing — ball first, finish on your front foot, stay balanced."
